

Heated Make-Up Air Filter Hood FN-BS-MP

Box Shelf Type

General Description

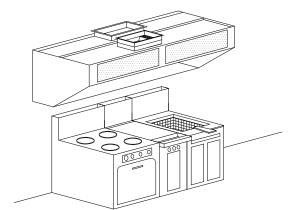

The FN-BS-MP filter hood is used on most cooking equipment except convection ovens, combi ovens, skillets and other tall appliances. The hood is a good option when the kitchen has a low ceiling or roof deck. The hood is finished in a No. 4 stainless steel finish on all exposed sides. The sketch to the left shows an optional left end panel. The tempered makeup air is discharged through a perforated stainless steel panel located on the front of the filter hood.

Efficiency

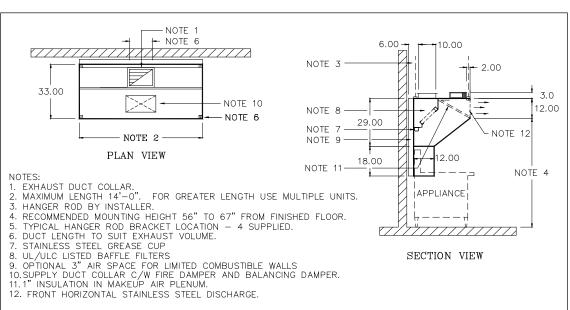

The hood is equipped with high efficiency UL/ULC listed

Baffle grease filters. The exhaust air accelerates through multiple turns within the baffle filter. Centrifugal forces causes grease dirt and lint to deposit on the baffles. The liquefied grease drains down the baffles, along the grease trough, and into a grease cup. **Exhaust and Supply**

The total exhaust to properly ventilate commercial kitchen is directly related to the type of cooking

equipment under the filter hood. An exhaust flow rate of between 150 to 400 CFM/ft. (233 to 620 l/s/m) is satisfactory for most installations. Directing the make-up air through the front of the hood provides the correct air quantity and excellent distribution within the kitchen.

Engineering Data

* Refer to the Ventilator Engineering Manual for Exhaust Volumes and Flow Rates not shown above.

Notes:

- •Exhaust duct can be located anywhere along length of the filter hood.
- •For lengths greater than 14' (4270 mm) join multiple sections together

Exhaust Flow Rate CFM/ft	Exhaust Static Pressure (in W.C.)
300	0.55
350	0.65
400	0.76
Supply Air Rate	Supply static Pressure
	("W.C.)
All Flow Rates	0.20

Specification

Model No. FN-BS-MP: The filter hood shall be a Spring Air Systems model no. FN-BS-MP, box canopy, high efficiency, filter hood, make-up air plenum with perforated stainless steel front discharge

UL/ULC listed, and built in accordance with the NFPA-96. The unit casing shall be a minimum 18 GA. Stainless steel with all exposed sides no. 4 finish.

The filter hood shall include UL/ULC listed baffle grease Filters mounted in an integral stainless steel rack inclined at 45 degrees. The filter rack shall include a full length stainless steel grease gutter and grease cup. The make-up air plenum shall be insulated with 1" attenuating foam. The supply duct collars shall each have a fire damper with a 165'F fusible link. The sheet metal contractor shall supply and access door on the duct above the damper for inspection. The hood shall have fluorescent/incandescent light evenly spaced along the length of the hood.
